

IT Applications Finance

Every server room runs **more than its list says.**

Moves stall on what nobody listed: a report job with an address written into it, a database two other systems read, a server whose owner left. **AI agents find them; our engineers agree each move with you.**

The same estate, every workload given its move.

Example

46

workloads found. The list had 12.

- On the list
- Found by AI agents

11

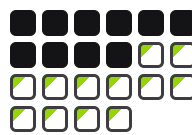

Move first

Few dependencies, a clear owner

22

Move later, in order

In groups, by your dates

4

Keep

Cheaper where it is, or has to stay; we tell you which before you commit

9

Switch off

Used by nobody

One team plans and moves it.

No hand-off: the engineers who assess your systems move them.

Savings come from what changes.

Switching off, sizing to real use, better licensing.

Funding AWS has set aside.

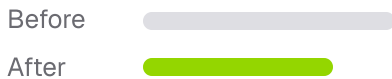

Its Migration Acceleration Program can fund the assessment, the preparation and the move. Many never claim it, because it needs a formal assessment first. We prepare the request and take it to AWS with you.

What it has done for clients

PIXIS

25%

lower cloud spend, nine AWS accounts made four

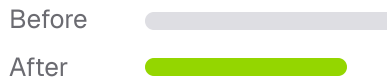

A U.S. fulfillment provider
a ~30-minute final cutover, planned group by group

DigitalStrike

20%

lower monthly AWS spend, uptime up from 95% to 99.9%

An executive search firm
zero disruption when its vendor shut down in December 2025

GAVEL

95%

less downtime during live auctions

A financial feedback platform
"By far, the smoothest I've experienced," its CTO

Book the Migration Readiness Workshop.

- ✓ **One day** with your IT, application and finance leads
- ✓ **Free:** AWS funding typically covers it
- ✓ Bring **your application list** and its contract dates
- ✓ **A phased plan**, yours with us or without us
